Ahmet Melih Temiz

Software Devoleper

Summary

I am a backend-focused software developer with strong experience in building scalable, high-performance systems. I have worked on complex architectures across cryptocurrency exchange platforms and multi-vertical e-commerce applications, contributing to both backend design and full-stack development when needed. I enjoy solving challenging technical problems, improving system performance, and collaborating with teams to deliver reliable, maintainable, and long-term solutions.

Work Experience

Balance Network
March 2023 - February 2025

At Balance Network, I led the backend development of our cryptocurrency exchange, first building the system with Spring Boot and later migrating it to NestJS for improved scalability and performance. I also contributed to the frontend by crafting intuitive, user-focused interfaces using React. Beyond the exchange platform, I worked across multiple decentralized and centralized projects, collaborating closely with the team to ensure reliable and efficient product delivery.

Görmek Lazım
September 2024 - Present

At Görmek Lazım, a multi-vertical e-commerce super-app covering marketplace, swap, auction, bazaar, and crafts modules, I work as a backend developer. Using Express.js and TypeScript, I build scalable backend services and contribute to the core architecture across different project domains to ensure reliable and efficient platform operations.

Skills

- NestJS
- Spring Boot
- NodeJS
- Java
- C#
- React
- Docker
- PostgreSQL
- MongoDB
- Redis

Projects

Görmek Lazım

- Developed core backend features for marketplace, auction, swap, bazaar, and crafts trading modules.
- Built modular and scalable services within a Node.js monorepo architecture.
- Optimized database models, indexes, and query performance.
- Improved overall system stability, performance, and maintainability.

Technologies Used:
Node.js, TypeScript, Express.js, MongoDB, Redis

Exchange - Past Work

- Backend Developer – Balance Network Exchange
- Led backend architecture for a full-scale cryptocurrency exchange platform.
- Developed the V2 backend using Java & Spring Boot alongside the team lead.
- Supported the frontend team with React when necessary.
- Solely built the V3 backend using NestJS, enhancing scalability and maintainability.

Technologies Used:
Spring Boot, NestJS, Typescript, React, MongoDB, Redis, PostgreSQL, Docker, Microservices

HTML Mail Sender

- Collaborated with a colleague to develop an NPM package for sending HTML-based emails with dynamic content rendering.
- Designed a simple and flexible structure that enables developers to easily generate and send customizable HTML email templates.
- Actively utilized the package in internal projects to streamline email workflows and improve communication efficiency.

Technologies Used:
TypeScript, Node.js, NPM, Nodemailer

OKX API Connect

- Built a TypeScript-based NPM package for seamless and type-safe interaction with OKX APIs.
- Typed request/response structures for multiple endpoints using official OKX documentation.
- Created a modular and developer-friendly architecture to simplify API usage and reduce errors.
- Improved developer experience with strong typing, consistent error handling, and clean abstractions.

Technologies Used:
TypeScript, Node.js

Education

Istanbul University Cerrahpaşa
Computer Programming
September 2020 - June 2022

Smart Pro Computer Academy
Web and Mobile Programming
September 2022 - February 2023

Istanbul University
Business Administration
September 2024 - Present
